5. Security & Trust

AdPilot holds the OAuth tokens that spend your ad budget and stores your audience data. Security is engineered as a first-class requirement — defense-in-depth, built to be as impenetrable as practical.

Your Money & Accounts

- **Hard spend caps** per account & workspace — the engine physically cannot exceed them.
- **Change-rate limits, approval gates** & a global **kill switch** on all automated actions.
- **Immutable, tamper-evident audit log** — every action logged with reason & one-click rollback.
- Anomaly detection auto-pauses suspicious spend spikes.

Token & Data Protection

- OAuth tokens **encrypted with KMS/HSM envelope encryption** — plaintext never stored, decrypted in-memory only.
- Encryption **in transit (TLS 1.2+/mTLS)** and **at rest**; field-level encryption for tokens & PII.

Access & AI Safety

- **Mandatory MFA**, passkeys, SSO/SAML & SCIM (Enterprise); step-up auth for high-risk actions.
- AI **cannot execute changes directly** — it only proposes actions that pass guardrails & (optional) human approval, neutralizing prompt-injection.
- Customer PII minimized to AI providers under zero-retention agreements.

Compliance & Assurance

- **GDPR & CCPA** compliant — DPA, data export & right-to-be-forgotten.
- Payments via **Stripe (PCI-DSS Level 1)** — card data never touches our servers.
- **SOC 2 Type II & ISO 27001** on the roadmap.

- Strict **tenant isolation** (RBAC + PostgreSQL row-level security).
- **EU data residency** option; encrypted, restore-tested, immutable backups.
- Independent **penetration testing** + ongoing bug-bounty program.
- Secure SDLC: SAST/DAST/SCA, secret scanning, supply-chain hardening.

Payment security: All transactions are processed by Stripe over encrypted connections and protected by 3-D Secure (SCA) where required. AdPilot never sees or stores full card numbers. Full details: [security-architecture.md](#).
